Subject: Rad surveys

Thank you for submitting the Closeout Radiological Survey Report for Building 779, Annex B for regulatory agency review and subsequently meeting to answer questions and resolve a few small issues regarding the report.

Both the State and EPA are satisfied with the report and this note constitutes our acceptance of the radiological surveys for Annex B. Additionally, EPA and CDPHE joint independent verification support the conclusions. We agree that radiological conditions of the annex meet the free-release requirements and that the annex is acceptable for demolition.

We look forward to receipt of additional survey results for the other building units.
